How many hours do you spend just looking for the articles you want to read?

☐ 1 hr. per week
☐ 2 hrs. per week
☐ 3 hrs. per week

That's how many hours ASCA® will save you.

If you're typical of most researchers, it's been shown that you spend up to one-fourth of your time just trying to keep abreast of advances in your field. And that includes many hours just looking for the articles. One, two, maybe three hours that ASCA can save you every week. For only $3 a week.

ASCA (Automatic Subject Citation Alert) saves your time by finding these important articles for you. You simply tell us what subjects interest you. What authors. What research. And we'll prepare a personal computer profile for you which reflects your exact reading interests no matter how narrow or wide ranging they may be. Then each week, *ASCA's* computer compares this profile with the articles in 3,500 leading scientific and technical journals and prints out a custom-tailored list telling you which articles to read and exactly where to find them.

But you'll never know how much time *ASCA* can save you until you try it. Give an *ASCA* information specialist a call (215-923-3300) and ask about our 13-week, $39 introductory offer. Or fill in and mail the coupon below. Then think about what you're going to do with all the time you'll save.

©1974 ISI

ISI® Institute for Scientific Information SV-394
325 Chestnut Street, Philadelphia, Pennsylvania 19106

☐ I'd like to take advantage of your introductory offer and try *ASCA*® for 13 weeks at $39. Please contact me. (Trial offer is limited to residents of the continental United States, Europe, and Mexico.)

Numerical Data and Functional Relationships in Science and Technology

Group III Crystal and Solid State Physics

Volume 7 Crystal Structure Data of Inorganic Compounds

Part a Key Elements F, Cl, Br, I Halides and Complex Halides

By **Wolfgang Pies** and **Alarich Weiss**

Editors: **K.-H. Hellwege** and **A. M. Hellwege**

XXXII, 647 pages. 1973
Cloth DM 460,–
ISBN 3-540-06166-5

Prices are subject to change without notice

Volume III/7a is the first part of Volume III/7, presenting as complete a compilation as possible on crystal data (space groups, lattice constants etc.) of about 20000 inorganic compounds which contain at least one of the elements **F, Cl, Br, I, O, N,** and **P,** and are not included in Volumes III/5 (Organic Crystals) or III/6 (Elements and Intermetallic Phases). Additional data and information are given. The atomic parameters are not listed but can be found in the original papers by references within the tables. The extent of the structure analysis (complete, qualitative or none) is indicated.
This subvolume: More than 3800 halides and complex halides arranged from a chemical point of view.
Original papers up to 1971.
References in Volume III/7 g, published 1974.
Comprehensive formula index and mineral name index in Volume III/7 h.

Part g: References for III/7

By **Wolfgang Pies** and **Alarich Weiss**
Editors: **K.-H. Hellwege** and **A. M. Hellwege**
IV, 457 pages. 1974. Cloth DM 230,–. ISBN 3-540-06541-5

Volume III/7 g comprehends the references for Volume III/7 a, which has recently been published, and for Volumes III/7 b–f, which will be published subsequently. It contains about 20000 citations from 1906 to 1971.
The references are arranged alphabetically for each year.

Instructions to Authors

Manuscripts should be *submitted in duplicate*, typed in double-line spacing on one side of the paper only. Form and contents should be carefully checked to exclude the need for corrections in proof. The author should mark in the margin where diagrams and tables should be inserted.

To speed up publication, authors will receive only *one set of proofs:* provisionally numbered page proofs. Authors are requested to correct typographical errors only; they will be charged for corrections involving changes, additions, or deletions to the original manuscript.

Formulae should be typewritten whenever possible, special attention being given to the placing of indices and exponents so that they are recognizable as such even though there is no difference in size. Formulae should preferably be written in a "linear" form e. g. $\exp(-\varepsilon/kT)$ instead of $e^{-\frac{\varepsilon}{kT}}$). Special typefaces (Greek, Script) should be shown by underlining in color. To avoid confusing the printer, please use red for Greek and green for Script, and underline in brown for bold face.

The following are *frequently confused:*

$\cup, \mathfrak{u}, \bigcup, U$; $\circ, o, O, 0$; $\times, x, X, \varkappa, \chi$; $\vee, v, \nu$; $\theta, \Theta, \phi, \varphi, \Phi, \varnothing, \emptyset$; ψ, Ψ; $\varepsilon, \in$; $1, l$:

a', a^1; the symbol a and the indefinite article a;

also the handwritten Roman letters:

c, C; e, l; I, J; k, K; o, O; p, P; s, S; u, U; v, V; w, W; x, X; z, Z;

Please take care to distinguish them in some way: preferably small letters should be underlined once and capital letters twice.

The papers should be preceded by an *English summary* of not more than 100 words. Papers not written in English should have an English translation of the title.

Immediately following the summary, a list of *key words* (not exceeding five items normally) should be supplied for subject indexing.

Literature references should be numbered and listed at the end of the paper. They should be cited as follows: *journal papers* — names and initials of all authors, journal with abbreviations according to the I.U.P.A.C. list (Chemical Abstracts, Vol. 55, 1961), volume and page number, year in parentheses; *books* — names of authors, full title, edition, place, publisher and year. References should be cited in the text by number.

Figures, graphs, tables and structural formulae should be separated from the text and be numbered. Original drawings and graphs should be made in Indian ink with lines of uniform thickness. Authors should keep in mind that drawings will be reduced to a size not exceeding 12 × 19,5 cm. In general it should be assumed that the same degree of reduction will apply to all figures in the same paper. Inscriptions should allow for any reduction in scale — a capital letter should be about 1.8 mm in hight in the final version. Computer print-outs should be black and evenly printed to allow direct reproduction.

Captions, which should be brief, should be typed separately and attached to the manuscript.
